# Programação para Web II

**MD - API / REST**

**Prof. Eliézer Zarpelão**

# Doubt

- Index.php → /path/
- .htaccess RewriteRule <regular expression> <url to translate> [FLAGS]
- RewriteRule ^(.+)\$ index.php?url=\$1 [QSA,L]
- L|Last
- QSA|qsappend
  - When the replacement URI contains a query string, the default behavior of RewriteRule is to discard the existing query string, and replace it with the newly generated one. Using the [QSA] flag causes the query strings to be combined.
- <https://httpd.apache.org/docs/2.4/rewrite/flags.html>

# Doubt

- **API gateway** is a layer that goes between your clients and services.
- Instead of clients sending requests directly to individual services, they send them to an API gateway. Then, the API gateway passes the requests on to the appropriate service.
